

Ultimate Access™

Globally dispersed data at the speed of NOW!

VCINITY™ DELIVERS

Federated Data

Enabling the consumption of data globally dispersed at the speed of Now.

Federated Compute

Enabled by federated data, the power of Federated Compute can be realized.

Speeds that Redefine FAST

Providing unprecedented performance when compute is geographically separate from data. Applications run at the speed of NOW!

Are you one of the 93% of enterprises pursuing Digital Transformation and looking to exploit Artificial Intelligence (AI) for driving business agility but are impeded by the burden of data? If data—the lifeblood of your enterprise—is geographically siloed, the inability to leverage that data poses a major roadblock to the success of Digital Transformation. Burdens of moving, copying, securing, managing and protecting data exist due to traditional methods of using data. A new approach now exists that reduces these barriers while achieving data agility demanded by Digital Transformation.

What if...your “Cloud First” initiative did not require moving data to the cloud?—Be Cloud Smart!

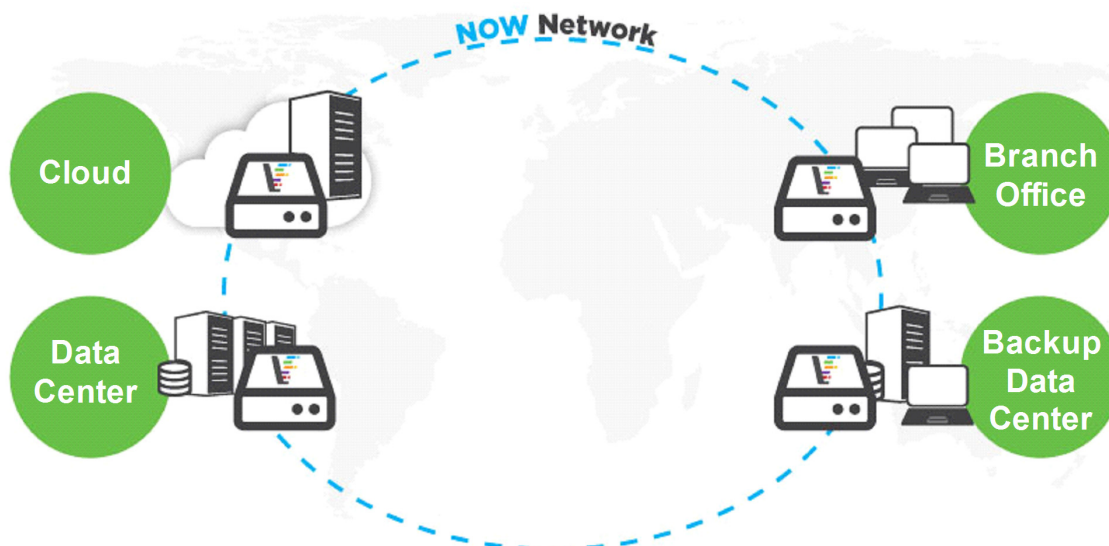

- Harness the power of a data-less Cloud
- Move applications to the Cloud—not the data
- Use/consume data left on-prem or another location of your choice from the Cloud
- Eliminate concerns with security, locality and egress costs levied on your data!

What if...you didn’t have to move or copy your data to use or process it?

- Work on your files from wherever they are from wherever you are (e.g., work on a file in Mumbai from New York, London or Sydney)
- No more downloading, copying, pre-caching or pre-staging
- No more endless waiting for file transfers

What if...this worked seamlessly with your apps and existing infrastructure?

- No rewriting apps, no extra software
- No network changes, no storage changes
- No need to redo your existing access policy

What if...when you had to move data, you could do it faster than ever?

- Send data across any distance at speed that redefines fast
- No compression, no deduplication, no alteration in any way
- Small files. Large files. Massive files—orchestrate the “what, where, when and why”

Sounds Like Magic?

It’s not... operational in US Intel and DoD theaters across the globe for a decade, successfully providing access to data “in-place” anywhere, regardless of distance, Vcinity allows you to:

- Run apps with compute in one place and data anywhere
- Leverage compute anywhere with data in-place
- Integrate with what you have

- Eliminate the 10’s of data copies required to run your business

Our products offer compelling business value:

- Leverage complete remote datasets in-place for rich insights from analytics AI/ML
- 50-86% reduction in data copies resulting in substantial cost savings
- 12x improvement in data migration to another data center, colo or cloud
- 5-44x faster data replication across any distance
- Improved data security of data-at-rest and in-transit
- Zero data loss (RPO) with near-zero downtime (RTO)

Vcinity enables various use cases for a variety of enterprise market segments such as media & entertainment, financial services, oil & gas, healthcare and government.

**Ultimate Access to the data you need, at the speed of now.
No downloading or sending of files required.**
